

LIBRARY ASSISTANT AGENT

PROBLEMS IN THE AGENT CONTEXT

Students sometimes find it difficult to find the required book in the library. The library Assistant Agent searches for the request book. It checks the book details and availability and gives a suitable result.

PROBLEM FORMULATION:-

Textual Formulation:-

States:-

The user provides the name or category of the book they want.

Action:-

The agent searches the library

collection and checks the availability of the required book.

3- Goal State:-

Find the required book and provide its availability and location, to the user.

4- Path Cost:-

Minimize the time and number of searches needed to find the required book.
